Skills

Java

Python

C#

Database - MySQL

Software Design and
Architecture

Data Mining

Object Oriented
Programming

Software Validation and
Testing

Summary

I am a 3rd year Software Engineering student at Üsküdar University.

Details

I take care to develop myself in different areas during the software development process.

I worked on a deep learning project using **Python** language. In this context, in a project where we used **SVM** and **KNN** classification algorithms, we aimed to produce logical predictions with the data set we created. I have a special interest and curiosity in **deep learning** and **data science**.

In addition, I worked on a Cinema Management System project that I developed using **Java** and **MySQL** with a layered architecture in accordance with **OOP** rules.

I aim to produce innovative solutions by combining both theoretical knowledge and practical experience.

I developed this portfolio website using **Streamlit** and Python, where I showcase my CV, projects, and educational background, providing easy access to my resume and contact information.

I am open to learning to continuously improve myself and adapt to new technologies.

Education

Bachelor of Software Engineering

Uskudar University

GPA : 3.71

2022-2026

Uskudar University Preparatory School

GPA : 86/100

2021-2022
